RPC CONTINUING EDUCATION GRANT REQUEST FOR APPLICATION

Overview

Sponsoring Organizations	Opioid Analgesic Risk Evaluation and Mitigation Strategy (REMS) Program Companies (RPC)
CE RFA Title	Opioid Analgesic Risk Evaluation and Mitigation Strategy (Opioid Analgesic REMS, or the REMS)
CE RFA Code	OA 120123
CE RFA Goal	The goal of the RPC's Continuing Education Request for Application (CE RFA) is to support high-quality REMS-compliant accredited continuing medical education (CME) or continuing education (CE), as defined by the applicable accrediting organization(s), designed to educate prescribers and other healthcare providers (HCPs), including pharmacists and nurses, on the treatment and monitoring of patients with pain. For a full list of relevant HCP professions, please reference the FDA-Requested Learner Level Data Information section of this Overview. Through education, the healthcare team will have an improved understanding of how to manage pain and the role of opioid analgesics along with non-pharmacologic and non-opioid analgesics in pain management. The education will also provide information about the risks of opioids and use of other therapies, which is intended to assist HCPs in reducing adverse outcomes of addiction/substance use disorder, unintentional overdose, and death resulting from inappropriate prescribing and misuse of opioid analgesics. The mechanism for achieving this goal is by educating HCPs, based on the U.S. Food and Drug Administration (FDA) requirements for the Opioid Analgesic REMS. ***Such education is to be based solely on the*** Opioid Analgesic REMS Education Blueprint for Health Care Providers Involved in the Treatment and Monitoring of Patients with Pain ***that was approved by the FDA in September 2018 (FDA Blueprint). The education should seek to optimize knowledge acquisition and translate that knowledge into practice.*** Successful grant applications submitted in response to the 2023 CE RFA should detail educational initiatives as outlined in Section 4 of this CE RFA. As part of the 2023 CE Grant Cycle, the Joint Accreditors (Accreditation Council for Continuing Medical Education [ACCME], Accreditation Council for Pharmacy Education [ACPE], and American Nurses Credentialing Center [ANCC]) will convene an Independent Grant Review Committee (IGRC). The purpose of the IGRC is to provide feedback to the RPC on the quality of grant applications submitted in response to the 2023 CE RFA and to recommend grant applications for funding by the RPC. The IGRC will be comprised of individuals who: ▪ Have relevant subject matter expertise ▪ Are not affiliated with the grant applicants under consideration ▪ Are not currently on the board or staff of any accreditors
CE RFA Elements Essential to Be REMS-	Educational design of proposed CE activities must incorporate all of the requirements for REMS-compliant accredited CE training: ▪ All CE activities must cover all elements of the FDA Blueprint.

Compliant Accredited CE	▪ Each CE activity must include an assessment that covers all sections of the FDA Blueprint. ➢ Grant applications should include strategies for increasing the likelihood of individuals completing the entire assessment. ➢ CE providers should collect educational outcomes data as requested by the FDA and developed independently of the RPC. ***Note that this data is reported annually to the FDA by the RPC.*** ➢ The RPC encourages grant applicants to outline plans for measuring HCP retention of the FDA Blueprint elements, as well as translating knowledge into practice. ➢ Grant applicants are encouraged to outline the development of interprofessional education and CE activities (i.e., representatives of targeted learner groups, case examples of pain problems addressed by an interdisciplinary team, interdisciplinary competencies described in the literature), particularly for HCPs practicing in settings with multidisciplinary healthcare teams. *Please reference the MedBiquitous specifications for a full list of REMS-related definitions currently under revision by the MedBiquitous Metrics Working Group (Appendix A).* ▪ For accredited CE providers requesting grant support under this CE RFA, provide a detailed description of the planned educational outcomes for the CE activity, as well as the following information: ➢ Moore's levels of outcomes the CE activity is designed to impact — For more information on Moore's levels of outcomes, please reference Appendix E. ➢ CE format (live or enduring) ➢ Date(s) of CE activity ➢ Duration of activity (i.e., time to complete activity) ➢ Average number of CE credit hours for each activity ➢ Education methods and tools for each activity (case-based, multimedia, didactic, interactive, adaptive, etc.) — For more information on education methods and tools definitions, please reference Appendix A. ➢ Criteria for successful completion (passing) ➢ Total proposed number of completers taking REMS-compliant accredited CE, as defined by the FDA: — Completer: An individual who has completed all components of an educational activity and meets the education provider's criteria for passing ▪ The CE activity is subject to independent audit conducted by an accrediting body not involved in the creation, production, or delivery of educational content or the determination of delivery method/platform. ➢ This audit ideally occurs prior to individuals encountering the CE activity. Therefore, the RPC-supported CE provider should report the CE activity via the reporting mechanism for the applicable accrediting body as soon as possible so that it can be subject to audit before the scheduled date of release or presentation to individuals. ➢ If the accrediting body selects the CE activity for audit, the CE provider should submit all requested documentation to ensure that all RPC-supported activities are fully REMS-compliant.

	— Documentation in which a medical expert (independent of but chosen by the RPC-supported CE provider) attests that the CE activity meets the REMS-compliant accredited CE requirements should be made available if a CE activity is selected by an accreditor for audit. The CE provider must also submit this content validation documentation as part of Milestone 2 specified in the CE Letter of Agreement (LOA) executed by all RPC-funded grant recipients. The CE activity must be conducted in accordance with the standards for accredited CE set by any appropriate specialty accrediting body, including but not limited to the following: ACCME, American Academy of Family Physicians (AAFP), American Association of Nurse Practitioners (AANP), American Academy of Physician Assistants (AAPA), ACPE, American Dental Association (ADA), ANCC, and American Osteopathic Association (AOA).
FDA-Requested Learner Level Data Information (*continued on next page*)	The FDA has requested that RPC-supported CE providers collect CE learner level data for those individuals who complete REMS-compliant accredited CE activities. Specifically, the FDA has asked that RPC-supported CE providers collect the CE learner data listed below. **Note:** While learner response is optional for some data fields, RPC-supported CE providers are required to request all of the below information from learners as part of the REMS-compliant CE activity. 1. Geographic location (learner response optional) a. State of primary practice 2. Prescribers (learner response optional) ➢ Indicate if you are able (licensed) to prescribe controlled substances (CS) (yes/no) ➢ If so, what type of registration allows you to do so? (individual, institutional, none) 3. Profession a. Physician b. Advanced practice nurse (e.g., APRN, CNS, NP, DNP, CRNA, CNMW, other) c. Physician Assistant d. Dentist e. Podiatrist f. Nurse g. Pharmacist h. Optometrist i. Psychologist j. Other health care professional k. Other 4. Practice area (learner response optional) a. Which best describes your practice area? i. Anesthesiology ii. Critical Care iii. Dentistry iv. Emergency v. Family Medicine vi. Geriatric vii. Hematology

	viii. Hospice and/or Palliative Care ix. Internal Medicine x. Neurology xi. Obstetrics/Gynecology xii. Oncology xiii. Ophthalmology xiv. Pain xv. Pediatric xvi. Physical Medicine and Rehabilitation xvii. Psychiatry xviii. Substance Use Disorder xix. Surgery 1) General surgery 2) Orthopedic surgery 3) Other surgical specialty xx. Urology xxi. Other (e.g., pharmacy, radiology, dermatology, cardiology, ambulatory care) xxii. N/A b. Do you perform surgical procedures? (yes/no) 5. Length of time learner has been in practice (learner response optional) a. Trainee (e.g., student, intern, resident, fellow) b. 0-5 years post training c. 6-10 years d. 11-15 years e. 16-20 years f. 21+ years *For more information on the technical specifications for CE learner level data, please see the* MedBiquitous specifications in Appendix A.
Key Dates	CE RFA Posted: January 12, 2023 Application Due Date: 11:59pm ET March 9, 2023 Award Notification Date: Q3 2023
CE RFA Response Document Parameters	Grant applicants should submit applications in MS Word. Please limit application submission to fifty (50) pages.
Submission Link	Grant applications must be submitted via the Grant Management System (GMS), which will be accepting grant applications in response to this CE RFA beginning on January 12, 2023. The GMS may be accessed on the RPC website via the right side link, "Accredited CE Provider Information." For this CE RFA, the appropriate code is 120123.
Questions on CE RFA?	Please contact the Grant Coordinator at RPC_CE@rems-pmo.com.

Table of Contents

Section 1: Scope of the Problem and Background on the REMS

The Intersection of Dual Public Health Issues

The nation is facing competing public health issues: the need to adequately treat a large number of Americans with acute and chronic pain, and a crisis of opioid use disorder. As described in the 2011 report by the National Academies of Science, Engineering, and Medicine (NASEM), *Relieving PAIN in America, A Blueprint for Transforming Prevention, Care, Education, and Research*, 100 million Americans suffer from common chronic pain conditions; fewer than half of Americans undergoing surgery report adequate pain relief; and 60% of Americans visiting the emergency department with acute painful conditions receive analgesics. In addition, since the COVID-19 pandemic was declared a National Health Emergency in March 2020, researchers have observed an increase in opioid use disorder and overdose deaths involving opioids.[1,2]

It is critical that HCPs are knowledgeable about the risks associated with opioid analgesics as they pertain to their patients as well as from a public health perspective. The data continue to show problems associated with certain prescribing of opioid analgesics.

- In 2020, 91,799 drug overdose deaths occurred in the United States, and of these, approximately 75% or 68,630 overdose deaths in 2020 involved an opioid; 82.3% of opioid-involved overdose deaths involved synthetic opioid.[3]
- Based on the 2020 National Survey on Drug Use and Health (NSDUH), 1.2 million people 12 or older initiated prescription pain reliever misuse in the past year; 9.3 million people aged 12 or older misused prescription pain relievers in the past year.[4]
- Provisional data from the Centers for Disease Control and Prevention (CDC) indicates that the number of overdose deaths rose to 93,331 in the 12-month period ending in December 2020. This number is the highest ever recorded for overdose deaths in a 12-month period.[5]
- In 2020, an average of 44 people died each day from overdoses involving prescription opioids, totaling more than 16,000 deaths. Prescription opioids were involved in nearly 24% of all opioid overdose deaths in 2020, a 16% increase in prescription opioid-involved deaths from 2019 to 2020.[6]

It is critically important that HCPs have all the information they need to properly treat and safely manage their patients' pain. It is also critical for HCPs to understand when opioid analgesics may be an appropriate treatment and how to implement best practices to ensure their patients' safety. A 2017 report by NASEM, *Pain Management and the Opioid Epidemic: Balancing Societal and Individual Benefits and Risks of Prescription Opioid Use,* describes the challenges of providing adequate pain management and calls for the establishment of "comprehensive pain education materials and curricula" for HCPs. [7]

Having broad knowledge about how to manage patients with pain can enable HCPs to consider ***all*** options for pain management, including non-pharmacologic and non-opioid pharmacologic options, and to reserve opioids for when non-opioid options are inadequate and when the benefits of the opioids are expected to outweigh the risks. This information can also aid HCPs in identifying and intervening when encountering obstacles that may reduce access to non-pharmacological and non-opioid medication options. Fully informed HCPs can help contribute to national efforts to address opioid use disorder.

REMS and the RPC

The Opioid Analgesic REMS is designed to ensure that the benefits of opioid analgesics outweigh the risks (in patients whose clinicians have determined opioid analgesics to be an appropriate treatment option). The goal of the Opioid Analgesic REMS is to educate prescribers and other HCPs, including pharmacists and nurses, on the treatment and monitoring of patients with pain. Through education, the healthcare team will have an improved understanding of how to manage pain and the role of opioid analgesics along with non-pharmacologic and non-opioid analgesics in pain management. The education will also provide information about the risks of opioids and use of other therapies, which is intended to assist HCPs in reducing adverse outcomes of opioid use disorder, unintentional or intentional overdose, and death resulting from inappropriate prescribing and misuse of opioid analgesics.[8]

The FDA determined that a shared system REMS was to be implemented for all extended-release/long-acting (ER/LA) opioid products within this drug class. On September 27, 2017, the FDA formally notified holders of new drug applications and/or abbreviated new drug applications for immediate-release/short-acting opioid (IR/SA) analgesic products that those products were to be included in the REMS moving forward.

A component of the Opioid Analgesic REMS is the provision of REMS-compliant accredited CE to educate HCPs on the treatment and monitoring of patients with pain. RPC-supported REMS-compliant accredited CE is provided through accredited CE activities supported by independent educational grants from the RPC. For a current listing of the RPC member companies, please reference Appendix C.

In order to be considered REMS-compliant (and eligible for RPC support), CE activities must include all elements of the FDA Blueprint.

Desired Outcomes and FDA Expectations of RPC-supported REMS-compliant Accredited CE

The FDA is seeking analysis of educational outcomes of RPC-supported REMS-compliant accredited CE that evaluates completer knowledge, attitudes, and behavior relating to pain management, as well as to appropriate opioid prescribing and understanding of key elements from all sections of the FDA Blueprint. Multiple methodologies should be used, including but not limited to pre-and post-activity knowledge assessments, long-term follow-up evaluation of learners to assess retention of knowledge and skills, application of learning to clinical practice, self-reported changes in behavior, and barriers to change.

The expected results of the REMS-compliant accredited CE, as described in the "Purpose of the Opioid Analgesic REMS HCP Educational Effort" section in the FDA Blueprint, are that HCPs of opioid analgesics should be knowledgeable about the following:

- Understanding the fundamental concepts of pain management, including definitions and mechanisms of pain
- Assessing patients with pain and identifying potential risk factors for opioid use disorder
- Utilizing the range of therapeutic options for managing pain, including non-pharmacologic approaches and pharmacologic (non-opioid and opioid analgesics) therapies
- Integrating opioid analgesics into a pain treatment plan individualized to meet the needs of the patient
- Managing patients on opioid analgesics safely and effectively in the acute and chronic pain settings, including initiating therapy, titrating, and discontinuing use of opioid analgesics, if appropriate and necessary
- Counseling patients and caregivers on the safe use of opioid analgesics, including proper storage and disposal

[8]FDA. "Online Opioid Summits." https://www.fda.gov/drugs/news-events-human-drugs/online-opioid-summits.

- Counseling patients and caregivers about the use of naloxone for opioid overdose
- Referring patients to a pain specialist, as appropriate
- Utilizing the fundamental elements of addiction medicine (i.e., diagnosis, prevention, evaluation, treatment, and recovery of patients with opioid use disorder)
- Identifying and managing the care of patients with opioid use disorder

In addition, HCPs will gain an understanding of current information about safe opioid practices and current federal and state regulations, national guidelines, and professional organization and medical specialty guidelines on treating pain and prescribing opioids. HCPs will also become familiar with the use of naloxone and the importance of its availability for use by patients and caregivers in the community and the home. [9]

In order to be REMS-compliant, and therefore eligible for educational grant support from the RPC, CE activities and material(s) must address all elements of the FDA Blueprint. While this represents FDA's overall expectation for RPC-supported CE activities, successful grant applications should translate such expectation into REMS-compliant accredited CE-compliant objectives and educational outcomes.

Key Learnings and Challenges

Since the inception of REMS-compliant accredited CE activities in early 2013, RPC-supported CE providers have been accruing information on both challenges in providing REMS-compliant accredited CE, as well as key learnings. In the interest of optimizing REMS-compliant accredited CE for individuals and achieving the education goals for the Opioid Analgesic REMS, RPC-supported CE providers have worked collaboratively to share this information within the CE community and with all Opioid Analgesic REMS stakeholders. Highlights of key learnings and challenges can be found in Appendix B.

Definitions and Clarifications

As part of the Opioid Analgesic REMS, the FDA identified HCPs as the intended audience for REMS-compliant accredited CE. REMS-compliant accredited CE learner level data specifications were developed and finalized by the MedBiquitous Metrics Working Group, which includes representation from accreditors, national CE provider organizations, RPC-supported CE providers, the FDA, the RPC, and other Opioid Analgesic REMS CE-related stakeholders. For a current list of learner level data specifications, please reference the MedBiquitous specifications on Opioid Analgesic REMS-related definitions developed by the MedBiquitous Metrics Working Group, which can be found in Appendix A.

The FDA Blueprint and additional information on REMS-compliant accredited CE can be found on the FDA's website.

[9] Id

Section 2: Funding Opportunity and Award Information

Anticipated Number of Awards	The number of grants awarded in 2023 will depend on the number and quality of grant applications submitted. Grants may be awarded for various CE delivery methods/platforms, including adaptive learning/personalized CE learning modalities and/or traditional CE delivery methods. CE activities must fully address the Opioid Analgesic REMS requirements and the FDA Blueprint, as well as outline the grant applicants' ability to engage HCPs.
Grant Budget	Budgets should be consistent with the realistic total number of individuals that the grant applicant estimates will successfully complete REMS-compliant accredited CE activities. ▪ Please outline how the proposed expected number of completers were determined, including any external factors such as the ongoing impacts of COVID-19 (e.g., increases in reported overdose deaths, increases in substance use disorder) and resultant changes in healthcare delivery. The RPC CE Subteam is interested in grant applications that are cost effective and collaborative, and that provide innovative CE activities or platforms and minimize redundancies in development costs. Grant applicants may propose budget models with multiple levels of support, allowing the RPC to review and potentially award funds for a subset of CE activities. CE providers submitting budget models exceeding $1,000,000 will be required to include how the activities conducted under the grant will target under-represented geographic regions / populations. Special purpose applications that may not meet the requirements set forth in this CE RFA but target under-represented populations or geographic regions are encouraged to be submitted and will be considered. As part of the application, grant applicants should include a breakdown of the total budget so that funds are appropriated based on the following planned schedule: ▪ Milestone 1: 35% of total grant budget ▪ Milestone 2: 20% of total grant budget ▪ Milestone 3: 20% of total grant budget ▪ Milestone 4: 25% of total grant budget ➢ Note*: During submission of the grant application in the GMS, input of this information is not required; however, it should be included in the detailed program information contained in your grant application. The final breakdown of milestones and associated payments will be determined upon receipt of award notification*. Once the RPC-supported CE provider has submitted a milestone report, milestone payment will be provided within seventy-five (75) days following RPC CE Subteam approval. Grant applicants should include timelines that reflect this milestone payment timeframe. **Note:** ▪ To be eligible to receive an RPC-funded grant, grant applicants must comply with applicable requirements of the Transparency Reports and Reporting of Physician Ownership Interests provisions of the Social Security Act 1128G (42 U.S.C.1320a-7h) (Physician Payments Sunshine Act). ▪ Grant applications may not use grant funds from the RPC for payments associated with the provision of food, beverages, travel, or lodging to meeting participants. ▪ RPC-supported CE providers must only use grant funds from the RPC to provide REMS-

	compliant accredited CE activities. ▪ RPC-supported CE providers are responsible for being aware of and abiding by applicable state-specific payment reporting requirements.
CE Activity Period	Because of the need to report ongoing progress to the FDA, general expectations of RPC-supported CE providers are as outlined below: ▪ The initial activity within the proposed training must begin within three (3) months of execution of the CE LOA. ▪ Unless otherwise noted in the application, all activities should begin by October 2023 and be completed no later than October 2024. Please see Appendix D for the 2023 CE Grant Cycle timeline. ▪ The RPC will accept grant applications from accredited CE providers to extend grant support for currently funded activities and/or for new proposed activities, if the content adheres to the FDA Blueprint. The RPC will endeavor to complete the application review process and notify selected grantees during Q3 of 2023.
Other Award Information	To optimize learning opportunities, the RPC intends to fund multiple CE providers and educational partners with different, yet complementary, initiatives. The RPC CE Subteam is interested in funding grant applications that propose high quality, creative activities that will enable achievement of educational outcomes. The IGRC, as subject matter experts, will provide initial review of applications and recommend those applications that demonstrate these characteristics for further review. Grant applicants must demonstrate how the proposed accredited CE will fully meet or exceed the requirements for compliance with the Opioid Analgesic REMS. The proposed activities must be cost-effective for the scope of the application, and include all of the information outlined in Section 4 below.

Section 3: Grant Applicant Eligibility Criteria

- Must be an accredited CE provider that will serve as the CE provider of record for the proposed activities

- Must be accredited by a national accrediting body to provide CE, including but not limited to ACCME, AAFP, AANP, AAPA, ACPE, ADA, ANCC, and AOA, or an equivalent accrediting body, or by an official state accrediting agency; the grant applicant must be in good standing at the time of application submission

Section 4: CE RFA Submission Information

Grant applications **must** include all of the following components listed below:

Application Component		Description
1	CE Provider of Record	Name of accredited CE provider and individual(s) responsible for the grant application, including contact information.
2	Partner Organizations	Name of any confirmed partner organizations to be involved in the proposed education, along with respective roles/responsibilities, contact information, and how the confirmed partner will assist in attracting new individuals to REMS-compliant accredited CE. If there are any partner organizations with which you are planning to collaborate in connection with your CE program, please indicate the following in your grant application: ▪ The planned partner organization name(s) ▪ The estimated time needed to secure the partnership ▪ Contingency plans to secure a subsequent partner if the original partner organization is unable to collaborate with your CE program ▪ How you plan to keep the RPC apprised of any changes to partnerships
3	Overview of Proposed Educational Activities	One to two-page summary/abstract describing: ▪ Overall project goals and the CE delivery method/platform, including adaptive learning, personalized CE models and/or traditional CE delivery methods ▪ Intended audiences that have been previously educated, as well as additional audiences to be targeted as part of this application (see Overview section for specifications on audiences) ➢ Prescribers that have an individual registration with the Drug Enforcement Administration (DEA) to prescribe controlled substances (CS) and/or are authorized to prescribe controlled substances under an institutional (hospital/clinic) DEA registration ➢ Other members of the healthcare team without authorization to prescribe ▪ Realistic estimate of the expected number of individuals who will participate in the REMS-compliant accredited CE ▪ Realistic estimate of the expected number of individuals who will complete the REMS-compliant accredited CE ▪ Cost per individual who completes the REMS-compliant accredited CE ▪ Grant amount sought ▪ Timeline of planned activities that aligns with the 2023 CE Grant Cycle, including the date of the first planned CE activity (i.e., Milestone 2) and completion of the last CE activity (i.e., Milestone 4); please refer to Appendix D for a detailed timeline
4	Faculty Selection Criteria/Team Member Qualifications	▪ Description of methods and criteria to be used to select proposed faculty and/or individuals involved in the development and implementation of proposed educational initiatives

		➢ ***Do not provide the names and credentials of proposed faculty members; applications will be rejected if names of faculty are listed*** ▪ Description and qualifications of team members responsible for implementing the project
5	Audience(s)	The audiences for REMS-compliant accredited CE, as outlined by the FDA, are those involved with direct patient care, including HCPs registered with the DEA, and who are eligible to prescribe all opioid analgesics, as well as non-prescribers involved in the care of patients receiving opioid analgesic therapy, non-pharmacologic therapies, and non-opioid medication therapies. ▪ Within this broadly defined audience, clearly identify your specific audience(s) ▪ Why this/these particular audience(s)? Include whether prior activities have not reached this audience and/or how you will be more successful in reaching this audience ▪ What expertise do you have motivating audiences to complete relevant components of accredited educational training (including assessment of learning)? **Note:** See the FDA Blueprint for the types of HCPs that are considered as acceptable target audiences for grant funding.
6	Scope/Populations	Specify the intended reach of your CE activity/offering: ▪ National ▪ Regional (multi-city, multi-state) ▪ State (local) ▪ Health system or integrated delivery networks ▪ Hospital or medical center ▪ Other community practice collaborations The RPC CE Subteam is interested in funding grant applicants that plan to provide REMS-compliant accredited CE in areas most affected by opioid use disorder, as outlined by the CDC. The RPC is particularly interested in funding grants that can provide REMS-compliant accredited CE in one or more of the following: ▪ States most affected by opioid use disorder, as outlined by the CDC ▪ Under-resourced states or regions/territories such as the District of Columbia, rural America, and Native American reservations / tribal lands. ▪ Under-resourced populations such as those affected by domestic violence and human trafficking
7	Needs Assessment	Needs assessment should be concise (one to two pages - 12-point font; one-inch margins, and double-spaced), properly referenced, and include one or more of the following as evidence and rationale for choosing specific audiences: a) Evidence of knowledge, practice, and/or educational modality gaps specific to audiences in the geographic area where the proposed activities will occur

b) Results from any surveys or assessments that have been executed with your specific audiences, in which the survey tool was specifically based on the FDA Blueprint

The needs assessment should provide rationale for targeted learners specifically related to the gaps among intended learner attitudes, what targeted learners may know, what targeted learners may be able to do, and standards that could improve intended learner performance.

Based on the gaps identified in the needs assessment, provide a list of the learning objectives that will determine the program's content, learning formats, and assessments. These should reference expected changes in learners' attitudes, knowledge, competence, or standards to improve their performance.

Based on a recent 2021 analysis of the literature partly published by the National Academy of Medicine, major causes for Patient Participation Groups (PPGs) were gaps in clinical knowledge (40%), attitudes and biases (30%), and/or failure to use/lack of available evidence-informed tools and resources (26%).
Key themes included unexplained differences in prescribing practices between groups of clinicians, the presence of harmful negative attitudes or biases held by HCPs towards patients or the interprofessional team, and reports of insufficient time/resources and health system constraints exacerbating PPGs. Further details may be found here.[10]

Note: A lengthy overview of general needs related to opioid risk and safety is not necessary, as this has been previously established and described in published literature. The needs assessment should be specific to the knowledge, audience and educational modality gaps addressed in your application. The Diagnostic and Statistical Manual of Mental Disorders, 5th Edition (DSM-5) utilizes the diagnosis of opioid use disorder, replacing the terms opioid abuse and opioid dependence from the 4th Edition (DSM-IV). As such, grant applicants are encouraged to utilize DSM-5 terminology (i.e., opioid use disorder).

The RPC CE Subteam is interested in funding grant applicants that can bridge gaps in learner knowledge of key messages in the FDA Blueprint, as well as assess educational outcomes by factoring in a diverse group of individuals and the impact of the REMS-compliant accredited CE.

Please outline the assessment process and how data/assessment educational outcomes will be provided to the RPC.

[10] Chappell, K., E. Holmboe, L. Poulin, S. Singer, E. Finkelman, and A. Salman, Editors. "Educating Together, Improving Together: Harmonizing Interprofessional Approaches to Address the Opioid Epidemic." *National Academy of Medicine,* (2021): 1

8	Description of Educational Training and Design **Note:** See Section 5 for details on how applications will be reviewed and evaluated	Detailed description of proposed educational training, and if appropriate, how the activities will: ▪ Incorporate adaptive learning/personalized CE and/or traditional CE delivery methods ▪ Align with all elements of the FDA Blueprint ▪ Meet all REMS-compliant accredited CE requirements (See Overview) ▪ Align with the proposed learning objectives to close the gaps in attitudes, knowledge, competence, and performance for audiences. Incorporate adult learning principles, utilize innovative instructional design principles, and employ best educational practices/methods to attract individuals and optimize both knowledge acquisition and the transfer of that knowledge into clinical practice ▪ Reinforce the value of including a multidisciplinary team in patient care ▪ Propose how the impact of REMS-compliant accredited CE will be measured by assessing individuals' knowledge and behaviors, preferably by utilizing a pre- and post-activity knowledge assessment, including long-term follow-up ➢ The RPC will consider grant applications that provide alternative methods for assessing the impact of REMS-compliant accredited CE. ▪ Outline how the CE activities are planned to be implemented given the ongoing impacts of COVID-19 (e.g., increases in reported overdose deaths, increases in substance use disorder) and resultant changes in healthcare delivery. Please include an attestation regarding full compliance with all applicable standards of your accrediting body, as well as other relevant standards, guidelines, and requirements as applicable to the conduct of independent CE/CME (including certification of good standing with the relevant accreditor(s) at the time of application).

9	RPC-supported CE Provider of Record	A detailed description of the relevant process should be included outlining which of the following will be validated prior to individuals encountering each CE activity: ▪ All elements of the FDA Blueprint are covered in the educational activity/materials to ensure completeness of content ▪ Content of the activity reflects the most current evidence-based information and aligns with the FDA Blueprint ▪ There is a fair balance and bias control within the content. Prior to finalizing content, the RPC-supported CE provider should check the FDA REMS website for any new information that may affect the content of the REMS-compliant accredited CE. Validation of clinical content and confirmation of other independent audit-related requirements apply to all REMS-compliant accredited CE activities, regardless of CE activity selection for independent audit by the relevant accreditor. Accredited CE providers must agree to provide documentation to the RPC in which a medical expert independent of, but chosen by, the accredited CE provider attests that the activity meets the REMS-compliant accredited CE requirements described in the Overview, whether or not the activity is selected for audit by an accrediting body.
10	Educational Outcomes Evaluation/Knowledge Assessment	Provide a detailed description of how you intend to assess the educational success associated with proposed learning objectives including the valid and reliable measures intended for utilization in the evaluation of activities/assessment of learning. Educational impact on HCPs' knowledge, competence, and performance may include attitudes, perceptions, and skills. In addition to educational activities covering all elements of the FDA Blueprint, each activity must: ▪ Include an assessment that covers all elements of the FDA Blueprint; preferred consideration will be given to grant applications that integrate the assessment throughout the activity in order to increase the likelihood of individuals completing the assessment ▪ Be subject to an independent audit by accreditors to confirm that the requirements of REMS-compliant accredited CE have been met
11	Marketing Plan for the Proposed Accredited CE Activities	Detail a marketing strategy for reaching individuals who are motivated to participate and complete all components of the REMS-compliant accredited CE, including an assessment of learning. Please include any specific marketing strategies for reaching individuals given the ongoing impacts of COVID-19 (e.g., increase in reported overdose deaths, increases in substance use disorder) and resultant changes in healthcare delivery. **Note:** Refer to Appendix B when developing the marketing strategy.

12	Budget	Submit a detailed budget using the template found within the GMS. The RPC will cover the cost of REMS service fees for accreditors that require reimbursement of costs incurred in conjunction with FDA-mandated independent audits and data aggregation/reporting. The budget template requests the estimated total REMS service fees for the proposed CE activities. ***The following REMS service fees are applicable for the 2023 CE Grant Cycle:*** ▪ ***ACCME: $2,000 per ACCME-accredited activity*** In the detailed program information section of the grant application, please explain the rationale for the proposed budget, including efficiencies, cost-effective approaches to RPC- supported activities, and an estimated cost per completer. ***The rationale should include an explanation of how the estimated number of completers was determined.*** Include a statement confirming that: ▪ The training meets the accreditation/certification requirements and standards of the specialty accrediting bodies (e.g., ACCME, AAFP, AANP, AAPA, ACPE, ADA, ANCC, and AOA). ▪ No RPC member company or representative has selected or provided suggestions for any speaker involved in an activity. The grant monies provided are for the activities as a whole and are not meant to be a direct payment to any speaker, as ultimate disbursement of grant monies is within the sole control of the RPC-supported CE provider. Proposed cost per completer for the entire project should be calculated and included as part of the budget.
13	Timeline of Project	The detailed project timeline for each phase and milestone will serve as the basis for the milestone payments in the awarded grant, as outlined below: Milestone 1: 35% of total grant budget ▪ Within thirty (30) days after execution of the CE LOA, submission and acceptance of initial activity listing, and provision of listing of RPC-supported activities to accrediting organizations, including entry of all activities into ACCME's Program Activity and Reporting System (PARS) / Joint Accreditors' Program Activity and Reporting System (JA-PARS) Milestone 2: 20% of total grant budget ▪ Start of first activity and upon acceptance of update report, content validation document and/or audit report(s) ➢ Note that the content validation document must include the CE provider name, grant ID, program title, confirmation that each CE activity fully aligns with the FDA Blueprint, and attestation that the reviewer is independent of the CE provider.

		Milestone 3: 20% of total grant budget ▪ Mid-term of activity timeline and upon acceptance of update report (including progress towards the grant metrics that the RPC-supported CE provider included in the approved application) Milestone 4: 25% of total grant budget ▪ Completion of last activity and submission/acceptance of required grant-related documentation (including final metrics for the education activity and budget reconciliation) Grant applicants are expected to understand and agree to adhere to this milestone payment schedule. The RPC-supported CE provider recognizes that upon submission of an invoice for a milestone payment, the RPC-supported CE provider may receive a request for additional information (RAI) from the RPC, either in writing, or in the form of a request for a teleconference, prior to RPC approval of the payment. CE providers are requested to provide the additional information within five (5) calendar days, however, if no response is received within seven (7) calendar days, the Grant Coordinator will confirm cancellation of the grant with the Grant Review Committee (GRC).
14	Guidelines for Change of Scope Requests	CE providers should submit Change of Scope (COS) requests via email to the Grant Coordinator for review / approval by the RPC CE Subteam. A COS request is required for changes to the following: ▪ Number of CE activities ▪ Format (e.g., live, enduring) ▪ CE activity title ▪ Increase/decrease in grant funding ▪ Milestone dates (i.e., start date of first CE activity (Milestone 2) and/or end date of last CE activity (Milestone 4)) *For updates to milestone dates, the COS request must be submitted **at least fifteen (15) days** prior to the original milestone completion date. Please note that delays in milestone report submission could result in the Joint Accreditors being made aware of the delay and the CE Subteam may consider discontinuing grant funding.* CE providers are encouraged to develop contingency plans to remedy any internal issues prohibiting timely submission of milestone reports (e.g., Provide Grant Coordinator a secondary point of contact.).

Section 5: Grant Application Review Criteria

Grant applications will be thoroughly and critically reviewed by members of the IGRC and RPC Grant Review Committee (RPC GRC) to ensure that applications are aligned with the FDA Blueprint and additional criteria noted below.

Grant applications should include a description of CE activities and indicate whether the intended audience has not been successfully reached in the past. The RPC is interested in advancing opportunities for REMS-compliant accredited CE within integrated delivery systems, accountable care organizations (ACOs), various health plans or third-party payers, worker's compensation organizations, healthcare insurers (if not listed above), professional organizations, organizations that administer state licensure requirements, and institutional accrediting bodies.

The RPC is interested in activities that were not planned and executed in previous CE grant cycles. Grant applicants should examine completed CE activities and strive to include new or creative ideas for expanding audiences and various activities. The RPC reiterates the need for inclusion of all elements of the FDA Blueprint in the grant application.

Awarded grant applicants will include elements in the grant application that clearly and sufficiently address the following criteria:

Criteria	Description
Compliance	The grant applicant (CE provider of record) continues to meet eligibility criteria outlined in Section 3.
Adaptive Learning or Personalized Education / Traditional CE Delivery Methods	In addition to detailing current CE activities, the grant applicant should incorporate adaptive learning/personalized CE and/or traditional CE learning methods, as applicable.
Alignment	To demonstrate how the CE activity will include all elements of the FDA Blueprint, the grant application should: ▪ Present a detailed mapping of how all elements will be covered in educational activities and training materials ➢ Grant application submission requires an attestation that all elements of the FDA Blueprint will be addressed as part of the CE activities and training materials, as well as a review of each core message of the FDA Blueprint to confirm alignment. ▪ Explicitly state that each of the sections of the FDA Blueprint will be covered in the assessment ➢ An **FDA Blueprint Mapping Document Template** (Appendix F) must be completed and uploaded as part of each application to confirm that each section of the FDA Blueprint will be covered. ***Grant applicants must not include any CE activity content when completing the FDA Blueprint Mapping Document Template (i.e., please only provide yes/no answers).***

Learner Data	Relative to FDA goals and MedBiquitous specifications /definitions, the grant application should include a realistic estimate of the number of individuals expected to complete each CE activity. See Overview for information on FDA-requested learner level data information. Grant applications should consider whether the intended audience(s) have been previously engaged by the applicant and/or other RPC-supported CE providers. Completing REMS-compliant accredited CE means that individuals have at a minimum: ▪ Received information/instruction that covers all elements of the FDA Blueprint ▪ Completed and passed an assessment of learning that covers all sections of the FDA Blueprint **Note:** Refer to **Key Learnings and Challenges** (Appendix B) when determining the number of individuals expected to complete the REMS-compliant accredited CE. The grant applicant should detail how the estimated number of completers was determined. ***Grant applicants must outline in detail how they plan to meet the proposed number of completers by the close of the grant (i.e., Milestone 4). Note that the RPC CE Subteam regularly tracks the reported number of completers in each milestone report compared to the expected number of such completers per the grant application.*** The RPC CE Subteam considers past performance of previously awarded RPC-supported CE providers, including the reported number of completers compared to the expected number of completers, when reviewing grant applications.
Qualifications of CE Provider and Partners	Grant applications should identify and describe any relevant, novel confirmed partnerships/coalitions across professional, governmental, and/or healthcare organizations that can achieve broad reach, engagement, and impact, and consider the inclusion of groups such as ACOs, integrated delivery networks, state licensing boards, and group health organizations. Additionally, grant applications should include a description of how the educators, collaborators, and other team members are suited for the educational activities outlined in the grant application, including relevant experience and/or training.

Needs Assessment[11,12,13]	The needs assessment should be specific to the target audience and determine the goals of the CE activities, ensuring that the content of the educational material is relevant and adapted to the needs and clinical practice circumstances of the individuals participating in the REMS-compliant accredited CE. The needs assessment should provide evidence about targeted learners specifically related to the gaps among intended learner attitudes, what targeted learners may know, what targeted learners may be able to do, and standards that could improve intended learner performance. The gaps should be clearly translated to proposed learning objectives that will be used to determine content, learning formats, and assessments. The overall strategy, methodology, and analyses should consider the specific aims of the education planned to be provided, as well as potential problems, alternatives strategies, and benchmarks for success.
Educational Design / Methods[14,15,16,17,18,19,20]	Grant applicants should ensure that the proposed educational design/methods fill a void. Consider currently available REMS-compliant accredited live and online CE activities (e.g., electronic activities for mobile devices, engaging print format), and/or utilize adaptive learning, simulation-based training, or other personalized education to encourage completion and promote participation in activities. Grant applicants should deliver content using evidence-based methods and multiple formats including, but not limited to, audio, visual, case discussions, role-plays, print materials, and other features of active learning and problem-based learning approaches, to guide individuals in reflection and application of new knowledge to their practice settings. CE activities should be innovative and creative in nature, motivating individuals to participate in and complete activities, including the requisite learning assessment inherent in REMS-compliant accredited CE, as well as utilizing novel concepts, approaches, formats, and methodologies that seek to shift current strategies for educating HCPs. Grant applicants should consider delivering content in digestible “chunks” or modules in ways that optimize learning. The implementation approach should include details about the utilization of support systems, as well as the dissemination approach available to the RPC-supported CE provider.

Knowledge Transfer[21]	Grant applicants should consider the incorporation of principles from the field of implementation science into overall learning activities. This incorporation should seek to address barriers to the application of the knowledge conveyed in the activities and improve overall HCP performance. Successful completion of the REMS-compliant accredited CE should lead to changes in the concepts, methods, technologies, treatments, services, and/or preventative interventions that drive meaningful behavior change. Application of REMS-compliant educational outcomes measures should encompass knowledge, competence, and performance.
Interprofessional Education[22,23]	Grant applicants should outline the provision of interprofessional education (i.e., representatives of targeted learner groups, case examples of pain problems addressed by an interprofessional team, interprofessional competencies described in the literature) and CE activities particularly for HCPs practicing in settings with multidisciplinary teams.
Valid and Reliable Outcome Measures[24,25,26]	Evidence of the validity and reliability of CE evaluation and outcome assessment methods should be provided; particular consideration will be given to grant applications that integrate assessments throughout the educational activity (versus waiting until the end of the entire activity) to optimize HCP completion.
Budget	The total proposed grant budget should include a reasonable cost per completer given the proposed educational activities (see Section 2).
Marketing Plan for CE Activities	Grant applications should include a detailed marketing strategy outlining: outreach to audiences, including new audiences, CE activities, and methods; how audiences will be motivated to participate in the CE activity and engaged to complete all components of the educational activity; and how to meet the CE provider's criteria for completing the accredited CE.

Appendix A: Definitions - Medical Education Metrics and Educational Methods

Medical Education Metrics
Medical Education Metrics provides a standard XML format for accredited CE educational outcomes data, including data related to REMS-compliant accredited CE. Please reference the related MedBiquitous specifications for a full list of REMS-related definitions developed by the MedBiquitous Metrics Working Group.

Note: Users should login or sign up to access the full specifications. Additional resources on activity reporting can be found via: https://medbiq.org/activity_report.

Individual
The learner has an individual registration with the DEA to prescribe controlled substances.

Institutional
The learner is authorized to prescribe controlled substances under an institutional (hospital/clinic) DEA registration.

None
The learner is not authorized to prescribe controlled substances.

RPC-supported CE providers are encouraged to check the MedBiquitous website periodically for updates: https://www.medbiq.org/standards

Educational Methods and Tools

- Didactic: A teaching method that follows a consistent scientific approach or educational style to engage the learner's mind
- Case-based: A first person account of an individualized evaluation, assessment, diagnosis, and treatment is presented, and discussion may or may not conclude the presentation
- Multimedia: Education that may include film, internet, didactic classroom presentation and other modalities, as well as immersive multimedia, which is the learning of digital media tools that requires a student to navigate a virtual environment and engage in multiple tasks while working through a digital simulation
- Interactive: A hands-on, real-world approach to education; interactive learning actively engages students through lectures that are changed into discussions where students and teachers become partners in knowledge acquisition
- Adaptive: Also known as adaptive teaching, an educational method that uses computer algorithms to orchestrate the interaction with the learner and deliver customized resources and learning activities to address the unique needs of each learner; in professional learning contexts, individuals may "test out" of some training to ensure they engage with novel instruction

Appendix B: Key Learnings and Challenges

While there are currently more than 75 different REMS approved by the FDA, the Opioid Analgesic REMS represents the first ***use of accredited CE*** to fulfill a REMS "training" requirement.

Key Learnings

- CE providers have shared that an adaptive learning approach can provide insights into the learner's capability when taking REMS-compliant accredited CE, as well as concepts that may be more challenging to understand and why.
- Some form of pain/opioid CE is required for at least one discipline in every state, and CE activities based on the FDA Blueprint fully meets the CE requirements in a majority (69%) of states.[27]

<u>REMS CE Learner Challenges</u>

- REMS-compliant accredited CE requirements can be daunting to HCPs.
  - Participating in REMS-compliant accredited CE can require a substantial investment of time.
- Relatively low "REMS awareness," as well as uncertainty about REMS can contribute to lack of motivation for HCPs to complete REMS-compliant accredited CE.
  - While HCPs are aware of the patient safety/public health issues related to opioids, the term "REMS" itself may not be particularly meaningful to HCPs.
    - There is existing available opioid education that competes with REMS-compliant accredited CE.

<u>RPC-supported CE Provider Challenges with REMS-compliant Accredited CE</u>

- The prescriptive nature of REMS-compliant accredited CE, as well as the lack of ability of knowledgeable clinicians to demonstrate evidence of prior learning/competence, may reduce an individual's incentive to complete REMS-compliant CE.
- Concurrent non-REMS-compliant accredited CE targets the same audience as REMS-compliant accredited CE.
- Reduction in the numbers of HCPs prescribing opioids may limit the number of HCPs interested in completing REMS-compliant accredited CE.
- REMS-compliant accredited CE can include a "greater-than-usual number of registration questions required of REMS activity participant," which may contribute to the length of the content.
- Competing activities offered by other agencies (e.g., CDC, state medical societies) may result in confusion by HCPs, which may reduce the number of individuals participating in REMS-compliant accredited CE.

[27] Duensing, Kathryn, Robert Twillman, Stephen Ziegler, M. Soledad Cepeda, David Kern, Maribel Salas, and Gregory Wedin. "An Examination of State and Federal Opioid Analgesic and Continuing Education Policies: 2016-2018." *Journal of Pain Research* (2020).

- In some states, there are specific state education requirements, and HCPs are therefore more likely to complete activities that enable them to meet state requirements.

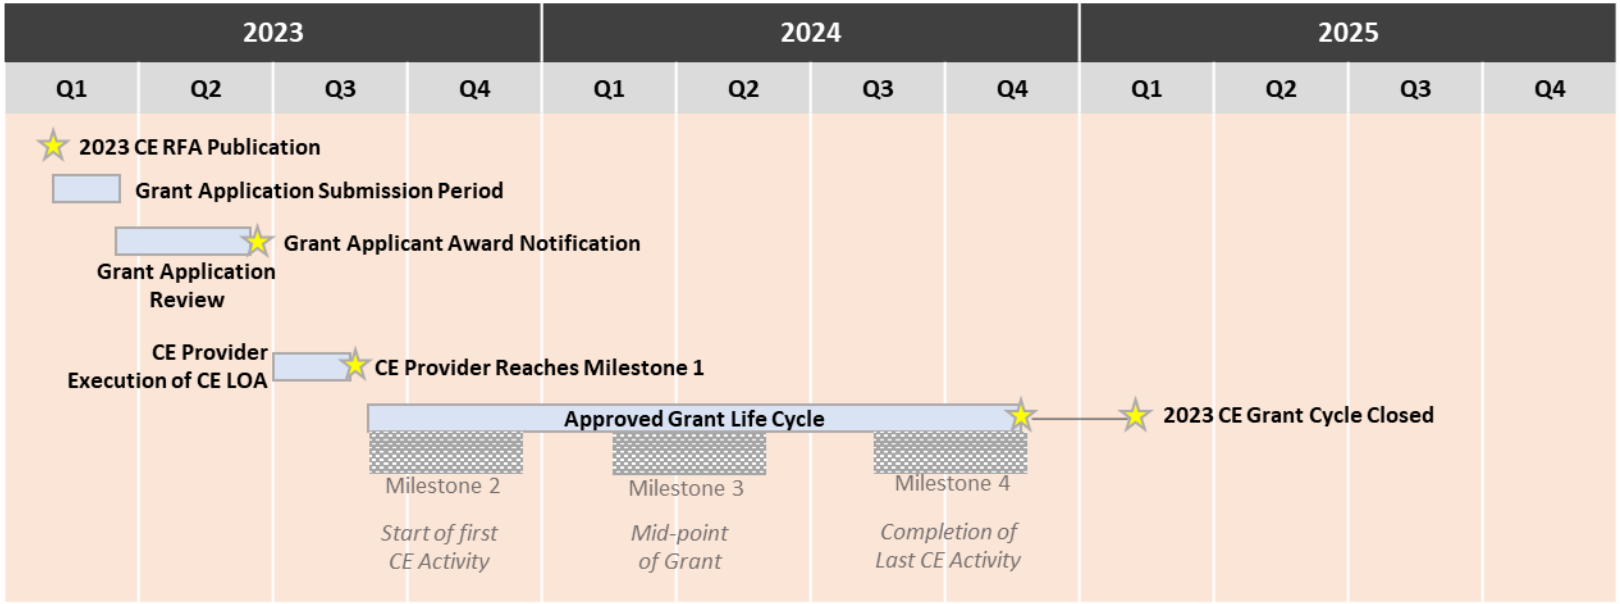
- Requirements for REMS-compliant accredited CE may not meet relevant CE requirements imposed by state licensing boards for various prescribing professions.
  - A list of CE requirements not met by REMS-compliant accredited CE by state and profession can be found in Appendix G.
- Limited REMS awareness, coupled with the time investment required, demands a strategic, innovative approach to attracting HCPs to complete REMS-compliant CE.
- Innovative partnerships with professional organizations and institutional credentialing bodies, e.g., may increase awareness of REMS, as well as enhance participation and increase the likelihood that learners will "successfully complete" the REMS-compliant accredited CE.
  - Providing REMS-compliant accredited CE within health systems may create challenges due to existing internal system processes and subsequently lead to lower numbers of completers.
- Some RPC-supported CE providers have noted that acknowledgement of completion and receipt of a certificate may increase the likelihood that individuals will successfully complete the full activity, while others have not seen any impact on overall participation.
- External factors such as the ongoing impacts of COVID-19 and resultant changes in healthcare delivery may impact participation in REMS-compliant accredited CE, and CE providers with web-based CE activities may be well positioned to continue offering CE activities in a format that is accessible for HCPs.

Note: Please reference the **Frequently Asked Questions (FAQs)** for more information on responding to the 2023 CE RFA.

Appendix C: Current Listing of the RPC Member Companies

1. Abhai, LLC	36. Mayne Pharma Commercial LLC
2. ACI Healthcare Limited	37. Megalith Pharmaceuticals Inc.
3. Akorn Operating Company LLC	38. Micro Labs USA Inc.
4. Allergan Sales, LLC	39. Mikart, Inc.
5. Alvogen, Inc.	40. Nortec Development Associates, Inc.
6. Amneal Pharmaceuticals, LLC	41. Nostrum Laboratories, Inc.
7. ANI Pharmaceuticals, LLC	42. Novitium Pharma LLC
8. Apotex, Inc.	43. Nuvo Pharmaceuticals, Inc.
9. Ascent Pharmaceuticals, Inc.	44. Osmotica Pharmaceutical US, LLC
10. Athena Bioscience, LLC	45. Padagis US LLC
11. Aurolife Pharma LLC	46. Pharmaceutical Associates, Inc.
12. Avanthi, Inc.	47. Protega Pharmaceuticals
13. Cerovene, Inc.	48. Purdue Pharma L.P.
14. Cipher Pharmaceuticals Inc.	49. Quagen Pharmaceuticals LLC
15. Collegium Pharmaceutical, Inc.	50. Rhodes Pharmaceuticals L.P.
16. Elite Laboratories, Inc.	51. Rising Pharma Holdings Inc.
17. Endo Pharmaceuticals Inc.	52. Rubicon Research Private Limited.
18. Epic Pharma, LLC	53. Sandoz Inc.
19. Fosun Pharma USA Inc.	54. Strides Pharma Global Pte. Limited
20. Genus Lifesciences Inc.	55. Sun Pharmaceutical Industries Inc.
21. Granules Pharmaceuticals Inc.	56. Teva Pharmaceuticals USA, Inc.
22. Hikma Pharmaceuticals USA Inc.	57. ThePharmaNetwork, LLC
23. Ingenus Pharmaceuticals NJ, LLC	58. Tris Pharma, Inc.
24. Ipca Laboratories Limited	59. Unichem Laboratories Limited
25. Janssen Pharmaceuticals, Inc.	60. Upsher-Smith Laboratories, LLC
26. Jerome Stevens Pharmaceuticals, Inc.	61. Validus Pharmaceuticals LLC
27. Kindeva Drug Delivery L.P.	62. Viatris
28. KVK-Tech, Inc.	63. Virtus Pharmaceuticals, LLC
29. Kowa Pharmaceuticals America, Inc.	64. VistaPharm, Inc.
30. Lannett Company, Inc.	65. WES Pharma Inc
31. Larken Laboratories, Inc.	66. Wockhardt Bio AG
32. LGM Pharma Solutions, LLC	67. Wraser Pharmaceuticals, LLC
33. Lupin Pharmaceuticals Inc. / Novel Laboratories, Inc.	68. Zydus Pharmaceuticals (USA) Inc.
34. Macleods Pharmaceuticals Limited	69. Zyla Life Sciences
35. Mallinckrodt LLC	

Appendix D: Sample Timeline for 2023 CE Grant Cycle



2023 CE Grant Cycle Activities	Tentative Dates for Grant Applicants
CE RFA Publication	January 2023
Application Submission Period Closed	March 2023 (*see* Overview *section for specific date*)
Grant Application Review Process*	March 2023 – July 2023
Grantee Award Notification	July 2023
Grantee Reaches Milestone 1	August 2023
Grantee Reaches Milestone 2	August 2023 – December 2023
Grantee Reaches Milestone 3	March 2024 – June 2024
Grantee Reaches Milestone 4	November 2024
Grant Closed	February 2025

*Grant Application Review Process time includes review of grant applications by the IGRC and the RPC GRC.

Note: The timeline presented is an example of a CE grant cycle to help grant applicants prepare their grant applications.

Appendix E: Moore's Levels of Outcomes

The impact of a REMS-compliant accredited CE activity can be measured using Moore's Levels of Outcomes. Please consider the seven levels outlined below when determining educational outcomes measures in the grant application:

Appendix F: FDA Blueprint Mapping Document Template

All educational activities must fully cover the elements of the Opioid Analgesic REMS Education Blueprint for Health Care Providers Involved in the Treatment and Monitoring of Patients with Pain approved by the FDA in September 2018, and must include an assessment that covers all sections of the approved FDA Blueprint. Please review each core message of the approved FDA Blueprint below and indicate whether this core message is planned to be included within the activity(ies) as part of the grant application.

FDA Blueprint Requirement	Will this core message be included in the CE activity(ies)?* (Yes/No)
Section 1	
I. The Need for Comprehensive Pain Education	
The FDA Blueprint was developed with two, competing, U.S. public health concerns in mind--(1) the large number of Americans with acute and chronic pain, and (2) the epidemic of prescription opioid abuse	Yes/No
II. Definitions and Mechanisms of Pain	
Pain can be categorized according to its duration, underlying pathophysiology of the original insult, and whether a central sensitization component has been developed. An understanding of these different categorizations can help direct therapeutic decisions. When defining, and classifying pain, the following should be taken into consideration: 1. Biological significance of pain (survival pain) 2. Relationship between accurate and chronic pain 3. Distinction between nociceptive and neuropathic pain	Yes/No
III. Assessing Patients in Pain	
HCPs should be knowledgeable about how to assess each patient when initiating a pain management program. When appropriate, evidence-based, standardized scales and tools can be used to document pain characteristics and guide management decisions throughout treatment, noting the strengths and weaknesses regarding specificity and sensitivity of these scales. Important elements of an initial assessment should include the following: 1. Patient history	Yes/No

2. Screening tools to evaluate the known risk factors for development of chronic pain after an acute injury or disease 3. Screening tools to evaluate the known risk factors for opioid use disorder (OUD) or abuse 4. Queries of state prescription drug monitoring programs (PDMPs) 5. Pain assessment scales/tools 6. Functional assessment scales 7. Physical examination 8. Family planning, including information about use of contraceptives, pregnancy intent/status and plans to breastfeed 9. Psychological and social evaluation 10. Diagnostic studies when indicated	
Section 2	
I. Components of an Effective Treatment Plan	
1. The goals of treatment, including the degree of improvement in pain and function when function has been impaired by pain 2. Possible constituents of the treatment plan, including nonpharmacologic approaches and pharmacologic therapies 3. Patient/prescriber/health care team interactions, including ▪ Patient responsibilities/compliance with the plan ▪ Responsibilities of the prescriber and health care team, including patient monitoring ▪ Plans for reviewing functional goals ▪ Use of supplemental medication for intermittent increases in pain ▪ Use of patient provider agreements (PPAs)	Yes/No
II. General Principles of Nonpharmacologic Approaches	
Pain can arise from a wide variety of causes. There are a number of nonpharmacologic and self-management treatment options that have been found to be effective alone or as part of a comprehensive pain management plan, particularly for musculoskeletal pain and chronic pain. Examples include, but are not limited to, psychological, physical rehabilitative, and surgical approaches, complementary therapies, and use of approved/cleared medical devices for pain management. HCPs should be knowledgeable about the range of treatment options available, the types of pain that may be responsive to those options, and when they should be used as part of a	Yes/No

multidisciplinary approach to pain management. HCPs should also be aware that not all nonpharmacologic options have the same strength of evidence to support their utility in the management of pain, and some may be more applicable for some conditions than others.	
III. General Principles of Pharmacologic Analgesic Therapy	
When using non-opioid medications in pain management, HCPs should be knowledgeable about the following: 1. Mechanism of action of analgesic effect 2. Indications and uses for pain management 3. Routes of administration and formulations used in pain management 4. Initial dosing, dose titration, dose tapering (when appropriate) for analgesia 5. Contraindications 6. Adverse events, with emphasis on labeled warnings 7. Drug interactions – both pharmacodynamic and pharmacokinetic	Yes/No
Opioid analgesic medications can be used successfully as a component of pain management. However, opioids carry risks not present with most non-opioid analgesics, specifically the risks of addiction, abuse, and misuse, which can lead to respiratory depression, overdose and death. Therefore, it is the responsibility of HCPs to be knowledgeable, not just about the presence of such risks, but about how to weigh these risks before prescribing an opioid and about how to properly manage patients who are prescribed opioids, both for short-term and long-term use. When using opioid analgesics as part of pain management, HCPs should be knowledgeable about the following: 1. General precautions 2. Mechanism of action and analgesic effect 3. Types of opioids (full agonists, partial agonists) 4. Indications and uses for pain management 5. Range of opioid analgesic products available for pain management and their related safety concerns 6. Initial dosing, dose titration, dose tapering (when appropriate) for analgesia 7. Contraindications 8. Adverse events 9. Drug interactions	Yes/No

10. Key safety strategies for use with opioid medications	
IV. Managing Patients on Opioid Analgesics	
Initiating treatment with opioids – acute pain 1. Patient selection 2. Dosing 3. Naloxone for home use 4. Screening tools for risk of abuse	Yes/No
Initiating treatment with opioids – chronic pain 1. Patient selection 2. Dosing 3. Considerations in opioid selection 4. When and how to use an opioid or non-opioid analgesic to supplement pain management	Yes/No
Ongoing management of patients on opioid analgesics 1. Periodic review of pain and functional goals 2. Review adverse events at each visit 3. Review refill history/review PDMP 4. How to determine when an opioid analgesic is no longer necessary/beneficial	Yes/No
Long-term management 1. Evaluation of the patient with worsening pain for changes in underlying condition and for signs of OUD before increasing opioid dosage 2. Changing opioid medications 3. Monitoring of patient adherence to the treatment plan, especially regarding misuse and abuse	Yes/No
HCPs should understand how to monitor patients taking opioid analgesics and identify the signs and symptoms of opioid misuse, abuse, and OUD and be knowledgeable about how to begin the process of intervention upon suspicion of an OUD	Yes/No
HCPs should be knowledgeable about when referral to a pain management specialist is indicated, including identifying patients at high risk for OUD and patients unable to achieve adequate pain management	Yes/No
HCPs should be knowledgeable about how to safely taper opioid analgesics, including how to recognize and manage signs and symptoms of opioid	Yes/No

withdrawal. HCPs should be knowledgeable about the particular risks associated with tapering during pregnancy.	
HCPs should recognize their role in reducing the risks associated with opioid analgesics through patient education at initiation of an opioid and throughout long-term management. 1. Inform patients about pain management expectations and managing pain through different pharmacologic and nonpharmacologic modalities 2. Use the *Patient Counseling Guide: What You Need to Know About Opioid Pain Medicines* as part of discussions with patients and caregivers when prescribing opioid analgesics 3. Counsel the patient about the following: a) Importance of adherence to prescribed dosing regimen b) Patients should use the least amount of medication necessary to treat pain and for the shortest amount of time c) The risk of serious adverse events that can lead to death d) The risk of addiction that can occur even when product is used as recommended e) Known risk factors for serious adverse events, including signs and symptoms of overdose and opioid-induced respiratory depression, GI obstruction, and allergic reactions, among others f) The most common side effects, along with the risk of falls, working with heavy machinery, and driving g) When to call the prescriber (e.g., managing adverse events, ongoing pain) h) How to handle missed doses i) The importance of full disclosure of all medications and supplements to all HCPs and the risks associated with the use of alcohol and other opioids/benzodiazepines j) Product-specific concerns, such as not to crush or chew ER products; transdermal systems and buccal films should not be cut, torn, or damaged before use, etc. k) How to safely taper dose to avoid withdrawal symptoms l) Safe storage and disposal, risks of theft by family members and household visitors m) Never share any opioid analgesic with another person	Yes/No

n) How and when to use naloxone products and their various means of administration o) Seeking emergency medical treatment if an opioid overdose occurs p) How to report adverse events and medication errors to FDA	
V. Addiction Medicine Primer	
HCPs should be knowledgeable about the basic elements of addiction medicine and be familiar with the definition, neurobiology, and pharmacotherapy of OUDs. In particular, stigmatizing or blaming language should be replaced with language that acknowledges that addiction, reclassified as *substance use disorder* in the revised Diagnostic Statistical Manual-V, is a disease. The term *opioid use disorder* should be used when referring to the use of opioids, rather than other substances. It should also be noted that there may be a differently than prescribed for the purpose of managing pain, in contrast to the patient who abuses an opioid analgesic with the intent of getting high. HCPs should be familiar with the following: 1. The neurobiology of OUD (addictive cycle) 2. Use of screening tools to identify patients at risk, based on known risk factors, and to identify patients developing signs of opioid dependence or addiction as early as possible 3. Management of OUD, including the types of pharmacologic and nonpharmacologic treatments available and when to refer to an addiction medicine specialist	Yes/No

*For individual activities with multiple modules, each module is not required to address the totality of the FDA Blueprint, however completion of all modules should address the totality of the FDA Blueprint.

Appendix G: CE Requirements Not Met by REMS-compliant Accredited CE

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
Dentists	IA	If prescribing opioids, must complete at least 1 CE (of the 30 required) in the area of opioids. The training shall include the following: **guidelines for prescribing opioids, including recommendations on limitations of dosages and the length of prescriptions**; risk factors for abuse; and nonopioid and nonpharmacologic therapy options.
	MI	3 Board-approved CEs in **pain and symptom management related to the practice of dentistry**. The CEs in pain and symptom management are part of, not in addition to, the required 60 CEs. CEs in pain and symptom management, as they relate to the practice of dentistry, may include, but are not limited to: behavior management, psychology of pain, pharmacology, behavior modification, stress management, clinical applications, and drug interactions.
	NE	Effective 01 October 2018, 3 CEs every 2 years regarding prescribing opiates. This may include education regarding prescribing and administering opiates, risks and indicators regarding development of addiction to opiates, and emergency opiate situations. **1/2 hour of the 3 CEs shall cover the PDMP.**
	NM	3 CEs every 3 years. CEs must include: an understanding of the pharmacology and risks on controlled substances; a basic awareness of the problems of abuse, addiction, and diversion; **awareness of state and federal regulations for the prescription of controlled substances**; and management of the treatment of pain.
	NY	All prescribers licensed to treat humans who have a DEA registration to prescribe controlled substances, as well as medical residents who prescribe controlled substances under a facility DEA registration, must complete at least 3 CEs in pain management, **palliative care**, and addiction. The following 8 topic areas must be included: **New York State and federal requirements for prescribing controlled substances**; pain management; appropriate prescribing; managing acute pain; **palliative medicine**; prevention, screening, and signs of addiction; responses to abuse and addiction; **end of life care**. All 8 topics must be completed prior to attestation; the topics can be completed in a single presentation or in individual segments for a total of at least 3 hours.
	OR	All dentists licensed by the Oregon Board of Dentistry will complete a **one-time 1 CE pain management course specific to Oregon provided by the Oregon Pain Commission of the Oregon Health Authority**.
	TN	2 CEs (of the 40) required in the area of prescribing of controlled substances education which includes **instruction in the Tennessee Chronic Pain Guidelines**.

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	UT	3.5 CEs every 2 years on controlled substance prescribing. The 3.5 CEs shall include: **the scope of the controlled substance abuse problem in Utah and the nation**; all elements of the FDA Blueprint for Prescriber Education under the FDA's Extended-Release and Long-Acting Opioid Analgesics Risk Evaluation and Mitigation Strategy, as published 09 July 2012, or as it may be subsequently revised; the **national and Utah-specific resources available to prescribers to assist in appropriate controlled substance and opioid prescribing; patient record documentation for controlled substance and opioid prescribing; and office policies, procedures, and implementation.**
	VT	Effective 08 June 2016: 2 CEs for each full licensing period on the topics of: abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; the **appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of controlled substances; and, **relevant state and federal laws and regulations concerning prescription of opioid controlled substance**.
	WI	2 CEs in the topic of responsible **prescribing of controlled substances for the treatment of acute dental pain** every licensing period.
Medical Doctors / Doctors of Osteopathy	LA	One time requirement: Effective 01 January 2018, as a condition to license renewal, all practitioners licensed to prescribe controlled substances are required to obtain CMEs pertaining to **drug diversion training**, best practices regarding prescribing of controlled substances, appropriate treatment of addiction, and any other matters pertaining to the prescribing of controlled substances that are deemed appropriate by the board.
	NE	Effective 01 October 2018, 3 hours every 2 years regarding prescribing opiates. This may include education regarding prescribing and administering opiates, risks and indicators regarding opiate addiction development and emergency opiate situations. **1/2 hour of the 3 shall cover the PDMP.**
	NM Medical Board	5 CMEs (of the 75 required) in pain management. Appropriate courses should include a review of **NM Medical Board Rule 16.10.14 NMAC on pain management**; an understanding of the pharmacology and risks of controlled substances, a basic awareness of the problems of abuse, addiction and diversion, and awareness of **state and federal regulations for the prescription of controlled substances**.

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	NM Osteopathic Board	6 CMEs (of the 75 required) in pain management. Appropriate courses should include a **review of 16.17.5 NMAC**, management of the treatment of pain, an understanding of the pharmacology and risks of controlled substances, a basic awareness of the problems of abuse, addiction and diversion, and **awareness of state and federal regulations for the prescription of controlled substances.**
	NY	All prescribers licensed to treat humans who have a DEA registration to prescribe controlled substances, as well as medical residents who prescribe controlled substances under a facility DEA registration, must complete at least 3 hours of course work or training in pain management, **palliative care**, and addiction. The following 8 topic areas must be included: **New York State and federal requirements for prescribing controlled substances**; pain management; appropriate prescribing; managing acute pain; **palliative medicine**; prevention, screening, and signs of addiction; responses to abuse and addiction; **end of life care**.
	OR	Within the first year of licensure, licensees must complete CMEs on pain management. **A 1-hour course provided by the Oregon Pain Management Commission is required** plus at least 6 more CMEs in pain management or the treatment of terminally ill and dying patients. Those 6 CMEs may be made up of any combination of CME coursework focusing on pain management and/or treatment of terminally ill and dying patients. This is a one-time requirement, but licensees may choose to obtain additional hours on these topics throughout their careers. The topic of pain management is legally considered relevant for all licensees, regardless of their specialty.
	TN	2 CMEs (of the 40) which must include instruction in: **the Department's treatment guidelines on opioids, benzodiazepines, barbiturates, and carisoprodol**; topics such as medicine addiction, risk management tools, and other topics approved by the Board. Providers of intractable pain treatment must have specialized CMEs in pain management. If you do not have a DEA registration and do not prescribe, at least 2 of the 40 required hours shall be in a course or courses designated specifically to address prescribing practices.
	UT	3.5 CMEs every 2 years on controlled substance prescribing. The 3.5 CMEs shall include: **the scope of the controlled substance abuse problem in Utah and the nation**; all elements of the FDA Blueprint for Prescriber Education under the FDA's Extended-Release and Long-Acting Opioid Analgesics Risk Evaluation and Mitigation Strategy, as published 09 July 2012, or as it may be subsequently revised; **the national and Utah-specific resources available to prescribers to assist in appropriate controlled substance and opioid prescribing; patient record documentation for controlled substance and opioid prescribing; and office policies, procedures, and implementation.**

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	VT	2 hours of continuing education for each full licensing period on the topics of: the abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; the **appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of controlled substances; and, **relevant state and federal laws and regulations concerning the prescription of opioid controlled substances.**
	WA	For MDs: To prescribe an opioid in Washington state, a physician licensed to prescribe opioids shall complete a one-time continuing education requirement regarding best practices in the prescribing of opioids **or** the opioid prescribing rules in this chapter. For DOs: In order to prescribe an opioid in Washington state, an osteopathic physician licensed to prescribe opioids shall complete a one-time CME regarding best practices in the prescribing of opioids **and** the **current opioid prescribing rules in this chapter**. The continuing education must be at least one hour in length.
	WV	Pain specialists need to have 30 pain-related CMEs every 2 years. Further, for all providers, unless they have completed and timely provided to the Board a Board-developed certification form and waiver request attesting that he or she has not prescribed, administered, or dispensed a controlled substance during the entire previous reporting period, every physician as a prerequisite to license renewal shall complete a minimum of 3 CMEs of **drug diversion training** and best practice prescribing of controlled substances training during the previous reporting period, of which **3 such CMEs may be provided only by a Board-approved program.**
	WI	2 CMEs required from Board-approved courses on responsible opioid prescription.
Naturopathic Physicians	VT	2 CEs for each full licensing period beginning on or after 08 June 2016 on the topics of: the abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; **the appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of controlled substances; **and, relevant state and federal laws and regulations concerning the prescription of opioid controlled substance.**

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
Nurses	AL	As a part of the 24 Board-approved or -recognized CEs for license renewal [610-X-4-.08], Certified Registered Nurse Practitioners (CRNP) and Certified Nurse Midwives (CNM) with prescriptive authority shall earn **6 CEs of pharmacology content specific to prescriptive practice in the approved area for collaborative practice**. Certified Registered Nurse Anesthetists (CRNA) shall earn 6 CEs of pharmacology.
	AR	Initial Applicants: APRNs issued a certificate of prescriptive authority after 31 December 2015 shall obtain a minimum of 3 CEs of prescribing education which include **information on maintaining professional boundaries and the prescribing rules, regulations and laws that apply to APRNs in the state of Arkansas** within 2 years of issuance of the prescriptive authority certificate. Renewals: APRNs with prescriptive authority shall complete 5 pharmacotherapeutics CEs in the APRN's area of certification each biennium prior to license renewal. **Effective 01 January 2017, 2 of the 5 hours must contain information related to maintaining professional boundaries and the prescribing rules, regulations and laws that apply to APRNs in the State of Arkansas. If it is your first renewal since issuance of Prescriptive Authority, you must take an additional 1 credit hour of continuing education related to prescription use and abuse. The link to this MANDATORY course is located on the ASBN website.**
	CA	**Nurse Practitioners (NPs) with Schedule II furnishing privileges must complete a 3-hour online Schedule II course through the CA Association for Nurse Practitioners. Certified Nurse Midwives (CNMs) with Schedule II furnishing privileges must complete a 2-hour online Schedule II course through the CA Association for Nurse-Midwives.**
	DE	**3 hours related to substance abuse** for all nurses (not just those with prescriptive authority). **APRNs with authority to prescribe controlled substances must complete the 1-hour Mandatory training on Delaware law, regulation and programs on prescribing and distribution of controlled substances**, and 10 CEs in pharmacology/pharmacotherapeutics in the past 2 years.
	IA	For ARPNs who prescribed opioids to a patient during the renewal cycle: a minimum of **2 CEs regarding the CDC guideline for prescribing opioids for chronic pain (at each renewal)**.
	NE	10 CEs related to pharmacology for APRN-NP. Effective 01 October 2018, 3 CEs every 2 years regarding prescribing opiates. This may include education regarding prescribing and administering opiates, risks and indicators regarding development of addiction to opiates, and emergency opiate situations. **1/2 hour of the 3 shall cover the PDMP.**

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	OR	1-time requirement of 7 CEs related to pain management for RN, LPN, and APRN **(1 hour must be a course to be provided by the Oregon Pain Management Commission. The remaining six hours can be nurse's choice of pain management topics.)** Of the 45 hours required for an APRN, 15 must be focused on pharmacotherapeutic content.
	TN	2 CEs designed specifically to address controlled substance prescribing practices **including the Tennessee Chronic Pain Guidelines**. The continuing education must include instruction in the Tennessee Department of Health's treatment guidelines on opioids, benzodiazepines, barbiturates and carisoprodol, and may include such other topics as medication addiction or risk management tools.
	UT	3.5 CEs every 2 years on controlled substance prescribing. The 3.5 CEs shall include: the **scope of the controlled substance abuse problem in Utah and the nation**; all elements of the FDA Blueprint for Prescriber Education under the FDA's Extended-Release and Long-Acting Opioid Analgesics Risk Evaluation and Mitigation Strategy, as published 09 July 2012, or as it may be subsequently revised; the **national and Utah-specific resources available to prescribers to assist in appropriate controlled substance and opioid prescribing; patient record documentation for controlled substance and opioid prescribing; and office policies, procedures, and implementation.**
	VT	2 CEs for each full licensing period beginning on or after 08 June 2016 on the topics of: abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; **appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of controlled substances; and, **relevant state and federal laws and regulations concerning the prescription of opioid controlled substance.**
Optometrists	MI	2 hours (of the 40) of Board-approved CEs in **pain and symptom management related to the practice of optometry**. May include: ethics and health policy related to pain; pain definitions; basic sciences related to pain, including pharmacology, psychology, sociology, and anthropology; clinical sciences related to pain, including specific pain conditions and pain in special contexts and settings; clinician-patient communications related to pain; management of pain, including evaluation and treatment and non-pharmacological and pharmacological management; ensuring quality pain care; and Michigan programs and resources relevant to pain.

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	UT	3.5 CEs every 2 years on controlled substance prescribing. The 3.5 CEs shall include: **the scope of the controlled substance abuse problem in Utah and the nation**; all elements of the FDA Blueprint for Prescriber Education under the FDA's Extended-Release and Long-Acting Opioid Analgesics Risk Evaluation and Mitigation Strategy, as published 09 July 2012, or as it may be subsequently revised; **the national and Utah-specific resources available to prescribers to assist in appropriate controlled substance and opioid prescribing; patient record documentation for controlled substance and opioid prescribing; and office policies, procedures, and implementation.**
	VT	Effective 08 June 2016: 2 CEs for each full licensing period on the topics of: abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; **appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of controlled substances; and, **relevant state and federal laws and regulations concerning the prescription of opioid controlled substances.**
Pharmacists	DE	At least 2 hours every 2 years must relate to the **distribution, dispensing, or delivery of controlled substances**; or, the detection and recognition of abuse or illegal use of controlled substances.
	FL	2 hours (of the 30) must be **Board-approved controlled substance CE.**
	OR	One-time requirement to complete 7 hours within 24 months of first license renewal; **1 hour must be the module from the Oregon Pain Management Commission**. A minimum of six hours of continuing education in pain management. This requirement may be fulfilled by any combination of continuing education coursework focusing on pain management **including but not limited to the treatment of terminally ill and dying patients**, and those with chronic, non-malignant pain.
	SC	1 hour (of the 15) must be related to **approved procedures for monitoring controlled substances listed in Schedules II, III, and IV.**
	VT	2 hours of CEs for each full licensing period beginning on or after 08 June 2016 on the topics of: abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; **appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
		controlled substances; and, **relevant state and federal laws and regulations concerning the prescription of opioid controlled substances.**
	WV	3 hours of **drug diversion training** and best practice prescribing of controlled substances training unless verifying he/she has not administered or dispensed a controlled substances during the entire previous reporting period. "Drug diversion training and best practice prescribing of controlled substances training" means a training course of at least 3 CPE hours which includes, at a minimum, all of the following: **drug diversion, including West Virginia statistics on prescription drug abuse and resulting deaths**; epidemiology of chronic pain and misuse of opioids; indication for opioids in chronic pain treatment including, at a minimum, general characteristics, toxicities, and drug interactions; patient evaluation and risk assessment and tools to assess risk and monitor benefits. Initiation and ongoing-management of chronic pain in patients treated with opioid based therapies, including, at a minimum: treatment objectives; medication therapy management and collaborative practice; prescription of controlled substance agreements; urine screens and pill counts; patient education on safe use, storage and disposal of opioids; discontinuation of opioids; and documentation and medical records; case study of a patient with chronic pain; identification of diversion and drug seeking tactics and behaviors; best practice methods for working with patients, prescribers, law enforcement, and others as appropriate, concerning patients suspected of drug seeking behavior and diversion; compliance with controlled substances laws and rules; and how to register with and use the West Virginia Controlled Substances Monitoring Program.
Physician Assistants	AL	To renew a Qualified Alabama Controlled Substances Certificate: Must have 4 AMA PRA Category 1 CEs every 2 years (after original 12 hours of state-sponsored CEs). The courses must be pre-approved by the Board. The initial 12 CEs include: **8 AMA PRA Category 1 CEs from "Prescribing Controlled Drugs; Critical Issues and Common Pitfalls"**; and, 4 AMA PRA Category 1 CEs that include advanced pharmacology and **prescribing trends** relating to controlled substances.
	IA	A licensee who has prescribed opioids to a patient during the renewal cycle shall complete a minimum of 2 CEs regarding the **guidelines for prescribing opioids for chronic pain, as issued by the Centers for Disease Control and Prevention of the United States Department of Health and Human Services**, including recommendations on limitations on dosages and the length of prescriptions, risk factors for abuse, and nonopioid and nonpharmacologic therapy options, as a condition of license renewal. These CEs may count toward the 100 CEs required for license renewal. The licensee shall maintain documentation of these hours, which may be subject to audit.

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	LA	Practitioners with a Controlled Dangerous Substance (CDS) license are required to complete at least 3 Board-approved CEs on the best practices for the prescribing of CDS, **drug diversion training**, appropriate treatment for addiction, and the treatment of chronic pain.
	NE	Effective 01 October 2018, 3 hours every 2 years regarding prescribing opiates. This may include education regarding prescribing and administering opiates, risks and indicators regarding opiate addiction development and emergency opiate situations. **1/2 hour of the 3 shall cover the PDMP.**
	NM	5 CEs in pain management. Appropriate CEs should include: **a review of NM Medical Board Rule 16.10.14 NMAC on pain management**; an understanding of the pharmacology and risks of controlled substances; a basic awareness of the problems of abuse, addiction, and diversion; and awareness of **state and federal regulations for the prescription of controlled substances**.
	NY	All prescribers licensed to treat humans who have a DEA registration to prescribe controlled substances, as well as medical residents who prescribe controlled substances under a facility DEA registration, must complete at least 3 CEs in pain management, **palliative care**, and addiction. The following 8 topic areas MUST be included: New York State and federal requirements for prescribing controlled substances; pain management; appropriate prescribing; managing acute pain; **palliative medicine**; prevention, screening, and signs of addiction; responses to abuse and addiction; and **end of life care**. All 8 topics must be completed prior to attestation; the topics can be completed in a single presentation or in individual segments for a total of at least 3 hours.
	OR	Within the first licensure year, licensees must complete CEs on pain management. **A 1-hour course provided by the Oregon Pain Management Commission is required** plus at least 6 more CEs in the subjects of pain management or the treatment of terminally ill and dying patients. This is a 1-time requirement, but licensees may choose to obtain additional hours on these topics throughout their careers. Furthermore, the topic of pain management is legally considered relevant for all licensees, regardless of their specialty.
	TN	2 CEs related to controlled substance prescribing, which must include instruction in **the Department's treatment guidelines (i.e., Tennessee Chronic Pain Guidelines) on opioids, benzodiazepines, barbiturates, and carisoprodol** and may include topics such as medicine addiction, risk management tools, and other topics approved by the PA Committee.

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	UT	3.5 CEs every 2 years on controlled substance prescribing. The 3.5 CEs shall include: **the scope of the controlled substance abuse problem in Utah and the nation**; all elements of the FDA Blueprint for Prescriber Education under the FDA's Extended-Release and Long-Acting Opioid Analgesics Risk Evaluation and Mitigation Strategy, published 09 July 2012, or as it may be revised; **the national and Utah-specific resources available to prescribers to assist in appropriate controlled substance and opioid prescribing; patient record documentation for controlled substance and opioid prescribing; and office policies, procedures, and implementation.**
	VT	2 hours of CE activity on controlled substances prescribing. The activity must be accredited as AMA PRA Category 1 CEs or American Academy of Physician Assistants Category 1 training. Required topics include: abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; **appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of controlled substances; and, **relevant state and federal laws and regulations concerning the prescription of opioid controlled substance**. Each licensee who is registered with the DEA and who holds a DEA number to prescribe controlled substances, or who has submitted a pending application for one, is presumed to prescribe controlled substances and must meet this requirement.
	WV	A physician assistant who has prescribed, administered, or dispensed any controlled substance pursuant to a West Virginia license during the reporting period shall complete a Board-approved CE activity for a minimum of 3 hours of **drug diversion training** and best practice prescribing of controlled substances training.
Podiatrists	IA	A licensee who has prescribed opioids to a patient during a renewal cycle shall have obtained a minimum of 1 CE regarding the **United States Centers for Disease Control and Prevention guideline for prescribing opioids for chronic pain**, including recommendations on limitations on dosages and the length of prescriptions, risk factors for abuse, and nonopioid and nonpharmacologic therapy options.
	NE	Effective 01 October 2018, 3 CEs every 2 years regarding prescribing opiates. This may include education regarding prescribing and administering opiates, risks and indicators regarding development of addiction to opiates, and emergency opiate situations. **1/2 hour of the 3 shall cover the PDMP.**
	NY	All podiatrists (and any other person licensed under Title 8) who have a DEA registration number AND all residents prescribing with a facility DEA registration number will be REQUIRED to take 3 CEs **approved by the DOH in pain management, palliative care, and addiction.**

Profession	State	Opioid/Pain Management CE Requirements; Gaps in Bold
	OR	By 2009 or within the first year of licensure, licensees must complete CEs on pain management. The requirements and exemptions are detailed in OAR 847-008-0075. **1 CE provided by the Oregon Pain Management Commission is required** plus at least 6 CEs in the subjects of pain management or the treatment of terminally ill and dying patients.
	UT	3.5 CEs every 2 years on controlled substance prescribing. The 3.5 CEs shall include: **the scope of the controlled substance abuse problem in Utah and the nation**; all elements of the FDA Blueprint for Prescriber Education under the FDA's Extended-Release and Long-Acting Opioid Analgesics Risk Evaluation and Mitigation Strategy, as published 09 July 2012, or as it may be subsequently revised; **the national and Utah-specific resources available to prescribers to assist in appropriate controlled substance and opioid prescribing; patient record documentation for controlled substance and opioid prescribing; and office policies, procedures, and implementation.**
	VT	All podiatry licensees who prescribe controlled substances shall certify at the time of each renewal that they have completed at least 2 CE activities on controlled substances prescribing. The CE must be accredited as AMA PRA Category 1 Credit training or Council on Podiatric Medical Education approved training. The following topics must be covered, as required by Vermont law: abuse and **diversion**, safe use, and appropriate storage and disposal of controlled substances; **the appropriate use of the Vermont Prescription Monitoring System**; risk assessment for abuse or addiction; pharmacological and nonpharmacological alternatives to opioids for managing pain; medication tapering and cessation of the use of controlled substances; and **relevant State and federal laws and regulations concerning the prescription of opioid controlled substances.** Each licensee who is registered with the U.S. Drug Enforcement Agency (DEA) and who holds a DEA number to prescribe controlled substances, or who has submitted a pending application for one, is presumed to prescribe controlled substances and must meet this requirement. Any podiatrist who is required to certify completion of this CE to renew, but who cannot, will be subject to the provisions regarding makeup of missing CE in 22.3 and 22.4.
	WV	Unless a podiatrist has completed and timely provided to the Board a Board-developed certification waiver form attesting that he or she has not prescribed, administered, or dispensed a controlled substance during the entire previous reporting period, every podiatrist as a prerequisite to license renewal shall complete a minimum of 3 CEs of **drug diversion training** and best practice prescribing of controlled substances training during the previous reporting period. The 3 CEs shall be part of the 50 total hours of continuing education required and not 3 additional hours.

FAQs

Milestones

- Following submission of a milestone report, when can I expect to receive payment?
  - Each RPC-supported CE provider executes a CE LOA that outlines milestone payment-related details. There are four milestones in a grant's life cycle, and each milestone includes specific requirements. Once the RPC-supported CE provider completes a milestone, a milestone report, relevant documentation, and an associated invoice are submitted through the GMS for RPC CE Subteam review. Following RPC CE Subteam review and approval, it can take up to 75 days for the RPC-supported CE provider to receive the milestone payment.
- How are the milestone dates determined?
  - Milestone 1 is reached upon completion of these activities:
    - CE LOA is fully executed.
    - Accrediting organization(s) are notified of RPC-reported activities.
    - ***While the RPC CE Subteam provides RPC-supported CE providers with the Milestone 1 date, the RPC-supported CE provider should consider the timing of the Milestone 1 payment when planning REMS-compliant accredited CE activities as well as the timing of subsequent milestone dates.***
  - Milestone 2 occurs upon the start of the first CE activity and RPC CE Subteam acceptance of the Milestone 2 report, content validation documents, and/or audit report(s). To provide the most accurate projected Milestone 2/CE activity start date, please consider a realistic project timeline, taking into account availability of funds and project resources.
  - Milestone 3 is the midpoint of the grant and can be calculated by finding the midpoint between the projected Milestone 1 and Milestone 4 dates.
  - Milestone 4 is the completion of the last REMS-compliant accredited CE activity and RPC receipt/acceptance of required grant-related documentation. Please note that closure of the grant occurs following approval of Milestone 4 and the subsequent associated payment.
- Can you provide a high-level timeline of expected milestone dates?
  - Please see Appendix D for an overview of the milestone dates for the 2023 CE Grant Cycle.
- What if my activity is not tracking to the number of proposed completers outlined in the grant application?
  - Grant applicants should provide a clear plan for reaching the number of proposed completers outlined in the grant application, including a contingency plan(s). Therefore, if the CE activity is not tracking to the number of proposed completers outlined in the grant application, the RPC-supported CE provider should implement the contingency plan(s) outlined in the grant application in order to reach the number of proposed completers by closure of the grant (i.e., Milestone 4).

CE Activity Search Page

- Does the RPC provide a list of REMS-compliant accredited CE activities offered by previously awarded and current RPC-supported CE providers?
  - The CE Activity Search Page includes currently ongoing enduring and live REMS-compliant accredited CE activities for RPC-supported CE providers. The goal of the CE Activity Search Page is to provide HCPs with access to available REMS-compliant accredited CE activities supported by the RPC.
- Can you provide more information about the requirements of the program title?
  - RPC-supported CE providers are encouraged to create a unique, specific program title. Please note that the CE activity displays on the CE Activity Search Page and provides individuals with an understanding of the program offerings. The program title submitted in the CE RFA should align with the program title in the CE LOA and other grant-related documentation.

REMS requirements

- What does the "FDA Blueprint" cover, as referenced throughout the CE RFA?
  - Per the FDA requirements for the Opioid Analgesic REMS, REMS-compliant accredited CE should be based solely on the FDA's Opioid Analgesic REMS Education Blueprint for Health Care Providers Involved in the Treatment and Monitoring of Patients with Pain approved in September 2018. The goal of the education is to optimize knowledge acquisition and translate that knowledge into practice. Please review the RFA Elements Essential to Meeting REMS-Compliant Accredited CE Requirements in the Overview section, which outlines expectations of REMS-compliant accredited CE per the FDA Blueprint.
  - **Note**: While the RPC does not anticipate changes in the FDA Blueprint, the RPC-supported CE provider should check the FDA REMS website for any new information that may affect the content of REMS-compliant accredited CE prior to finalizing CE activity content.

FDA Blueprint Mapping Document Template

- Where can I find the FDA Blueprint Mapping Document Template?
  - The FDA Blueprint Mapping Document Template can be found in Appendix F of the CE RFA.

CE RFA submission

- Can I receive an extension for submitting an application if it is not complete by the specified deadline?
  - No. The application submission deadline is 11:59pm ET on March 9, 2023. To avoid any technical delays, grant applicants should submit their grant application prior to the deadline, as the submission portal closes at 11:59pm ET on March 9, 2023.
- How can supporting materials be submitted with the grant application?
  - Grant applicants are able to submit supporting materials to accompany their grant application via the GMS as part of the detailed program information. Please limit the detailed program information to no more than 50 pages.
- I have additional questions regarding application submission via the GMS. Whom should I contact?

If you have additional questions regarding the submission of your application in the GMS, you may contact the Grant Coordinator at RPC_CE@rems-pmo.com.

Reporting "Completer" Data

- What is the definition of a "Completer"?
  - An individual who has completed all components of an educational activity and meets the education provider's criteria for passing.
- How do I accurately report "Completer" numbers?
  - An individual should only be counted as a "Completer" if they have completed all components of an educational activity, *which fully covers the elements of the Opioid Analgesic REMS Education Blueprint for Health Care Providers Involved in the Treatment and Monitoring of Patients with Pain* approved by the FDA in September 2018, and meet the education provider's criteria for passing
